

PSI Product List: Ingredients and Uses

Source: Pharmaceutical Solutions Industry (PSI) product pages at psiltd.com. This report compiles products listed on the PSI website and adds sheet-ready ingredient/composition and intended-use summaries.

Important note: PSI product pages list product names/strengths and product categories, but not full product leaflets, exact excipients, contraindications, or country-specific approved indications for every item. The ingredients and uses below are concise reference summaries based primarily on the product names/strengths and standard class use. For clinical use or database publishing, verify each row against the official product leaflet, registration dossier, or local regulator-approved SmPC.

Total rows: 90

Category	Product name	Ingredients / composition	Uses / indications
Basic large-volume parenterals	Water for Injection	Sterile water for injection.	Sterile diluent/vehicle for reconstitution or dilution of parenteral medicines. Not intended for direct IV infusion unless made approximately isotonic.
Basic large-volume parenterals	Normal Saline (Sodium Chloride 0.9%)	Sodium chloride 0.9% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	1/2 Normal Saline (Sodium Chloride 0.45%)	Sodium chloride 0.45% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	1/4 Normal Saline (Sodium Chloride 0.225%)	Sodium chloride 0.225% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	1/5 Normal Saline (Sodium Chloride 0.18%)	Sodium chloride 0.18% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	Sodium Chloride 3%	Sodium chloride 3% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	Sodium Chloride 5%	Sodium chloride 5% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	Sodium Chloride 7.5%	Sodium chloride 7.5% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	Sodium Chloride 10%	Sodium chloride 10% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	Sodium Chloride 20%	Sodium chloride 20% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic large-volume parenterals	Ringer Solution	Balanced electrolyte solution containing sodium, potassium, calcium, and chloride salts in water.	IV fluid/electrolyte replacement and hydration.
Basic large-volume parenterals	Ringer Lactate	Balanced electrolyte solution containing sodium, potassium, calcium, chloride, and lactate salts in water.	IV fluid/electrolyte replacement, perioperative fluid replacement, and extracellular fluid loss replacement.
Basic large-volume parenterals	1/2 Hartman's Solution	Balanced electrolyte solution containing sodium, potassium, calcium, chloride, and lactate salts in water.	IV fluid/electrolyte replacement, perioperative fluid replacement, and extracellular fluid loss replacement.
Basic large-volume parenterals	Dextrose 5%	Dextrose 5% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 10%	Dextrose 10% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 20%	Dextrose 20% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 25%	Dextrose 25% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 40%	Dextrose 40% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 50%	Dextrose 50% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 5% in Normal Saline	Dextrose 5% in Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 5% in 1/2 Normal Saline	Dextrose 5% in 1/2 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 5% in 1/4 Normal Saline	Dextrose 5% in 1/4 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 5% in 1/5 Normal Saline	Dextrose 5% in 1/5 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 2.5% in 1/2 Normal Saline	Dextrose 2.5% in 1/2 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 4% in 1/5 Normal Saline	Dextrose 4% in 1/5 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 4.3% in 1/5 Normal Saline	Dextrose 4.3% in 1/5 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 10% in Normal Saline	Dextrose 10% in Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 10% in 1/2 Normal Saline	Dextrose 10% in 1/2 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.

Category	Product name	Ingredients / composition	Uses / indications
Basic large-volume parenterals	Dextrose 10% in 1/4 Normal Saline	Dextrose 10% in 1/4 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 10% in 1/5 Normal Saline	Dextrose 10% in 1/5 Normal Saline in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 5% in Ringer Solution	Dextrose 5% in Ringer Solution in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 5% in Ringer Lactate	Dextrose 5% in Ringer Lactate in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Dextrose 5% in 1/2 Hartman's Solution	Dextrose 5% in 1/2 Hartman's Solution in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic large-volume parenterals	Mannitol 10%	Mannitol 10% in water for injection.	Osmotic diuretic used for raised intracranial/intraocular pressure and to promote diuresis under medical supervision.
Basic large-volume parenterals	Mannitol 20%	Mannitol 20% in water for injection.	Osmotic diuretic used for raised intracranial/intraocular pressure and to promote diuresis under medical supervision.
Basic large-volume parenterals	Sodium Lactate 1/6 M	Sodium lactate 1/6 molar solution.	Alkalinizing agent/fluid used for correction of metabolic acidosis under medical supervision.
Basic large-volume parenterals	Sodium Bicarbonate 8.4%	Sodium bicarbonate solution at listed concentration.	Alkalinizing agent used for metabolic acidosis, urine alkalinization, and haemodialysis-related bicarbonate supply depending on presentation.
Basic small-volume parenterals	Water for Injection	Sterile water for injection.	Sterile diluent/vehicle for reconstitution or dilution of parenteral medicines. Not intended for direct IV infusion unless made approximately isotonic.
Basic small-volume parenterals	Normal Saline (Sodium Chloride 0.9%)	Sodium chloride 0.9% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic small-volume parenterals	Sodium Chloride 3%	Sodium chloride 3% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic small-volume parenterals	Sodium Chloride 5.85%	Sodium chloride 5.85% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic small-volume parenterals	Sodium Chloride 14.6%	Sodium chloride 14.6% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic small-volume parenterals	Sodium Chloride 20%	Sodium chloride 20% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic small-volume parenterals	Sodium Chloride 23.4%	Sodium chloride 23.4% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic small-volume parenterals	Sodium Chloride 30%	Sodium chloride 30% in water for injection.	IV fluid/electrolyte replacement, hydration, and/or medication diluent. Hypertonic concentrations are for clinician-directed sodium replacement or electrolyte correction only.
Basic small-volume parenterals	Potassium Chloride 15% (2mEq/ml)	Potassium Chloride 15% (2mEq/ml).	IV potassium/electrolyte replacement or maintenance fluid with potassium, used only with monitoring and dilution as appropriate.
Basic small-volume parenterals	Calcium Chloride 10%	Calcium chloride 10% solution.	Calcium replacement; emergency use in severe hypocalcemia, hyperkalemia cardioprotection, or calcium-channel blocker toxicity under specialist care.
Basic small-volume parenterals	Calcium Gluconate 10%	Calcium gluconate solution at listed concentration.	Calcium replacement; treatment of hypocalcemia and cardioprotection in hyperkalemia under medical supervision.
Basic small-volume parenterals	Magnesium Sulphate 10%	Magnesium Sulphate 10% solution.	Magnesium replacement; treatment of hypomagnesemia, eclampsia/pre-eclampsia seizure prevention/treatment, and selected arrhythmias under medical supervision.
Basic small-volume parenterals	Magnesium Sulphate 50%	Magnesium Sulphate 50% solution.	Magnesium replacement; treatment of hypomagnesemia, eclampsia/pre-eclampsia seizure prevention/treatment, and selected arrhythmias under medical supervision.
Basic small-volume parenterals	Dextrose 5%	Dextrose 5% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic small-volume parenterals	Dextrose 10%	Dextrose 10% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic small-volume parenterals	Dextrose 20%	Dextrose 20% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic small-volume parenterals	Dextrose 25%	Dextrose 25% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic small-volume parenterals	Dextrose 40%	Dextrose 40% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Basic small-volume parenterals	Dextrose 50%	Dextrose 50% in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.

Category	Product name	Ingredients / composition	Uses / indications
Basic small-volume parenterals	Sodium Bicarbonate 8.4%	Sodium bicarbonate solution at listed concentration.	Alkalinizing agent used for metabolic acidosis, urine alkalinization, and haemodialysis-related bicarbonate supply depending on presentation.
Plasma volume substitutes	Plasmex	Not specified on PSI product page.	Listed by PSI under plasma volume substitutes; used as a plasma volume expander/substitute. Verify composition from official leaflet.
Plasma volume substitutes	Hespond	Not specified on PSI product page.	Listed by PSI under plasma volume substitutes; used as a plasma volume expander/substitute. Verify composition from official leaflet.
Pre-mixed IV solutions	0.15% KCl in 5% Dextrose and 0.45% NaCl	0.15% potassium chloride in 5% Dextrose and 0.45% sodium chloride.	IV potassium/electrolyte replacement or maintenance fluid with potassium, used only with monitoring and dilution as appropriate.
Pre-mixed IV solutions	0.15% KCl in 5% Dextrose and 0.20% NaCl	0.15% potassium chloride in 5% Dextrose and 0.20% sodium chloride.	IV potassium/electrolyte replacement or maintenance fluid with potassium, used only with monitoring and dilution as appropriate.
Pre-mixed IV solutions	0.15% KCl in 5% Dextrose	0.15% potassium chloride in 5% Dextrose.	IV potassium/electrolyte replacement or maintenance fluid with potassium, used only with monitoring and dilution as appropriate.
Pre-mixed IV solutions	2gm Lidocaine in 5% Dextrose	2gm Lidocaine in 5% Dextrose in water for injection.	IV carbohydrate/caloric fluid, hydration, treatment/prevention of hypoglycemia where appropriate, and/or maintenance fluid depending on electrolytes included.
Pre-mixed IV solutions	1% Calcium Gluconate in Isotonic Salt Solution	Calcium gluconate solution at listed concentration.	Calcium replacement; treatment of hypocalcemia and cardioprotection in hyperkalemia under medical supervision.
Irrigation solutions	Water for Irrigation	Sterile water for irrigation.	Irrigation of body cavities, wounds, and surgical fields; not for injection.
Irrigation solutions	Sodium Chloride 0.9% for Irrigation	Sodium chloride 0.9% irrigation solution.	Isotonic irrigation/washing solution for surgical or wound irrigation; not for injection unless labeled for injection.
Irrigation solutions	Glycine 1.5% for Irrigation	Glycine 1.5% irrigation solution.	Urological/endoscopic irrigation where non-electrolyte irrigant is required.
Water for reconstitution	Distilled Water	Distilled/purified water.	Diluent, reconstitution, laboratory/pharmaceutical use depending on presentation. Verify product leaflet for route and sterility.
Distilled water	Distilled Water	Distilled/purified water.	Diluent, reconstitution, laboratory/pharmaceutical use depending on presentation. Verify product leaflet for route and sterility.
Haemodialysis solutions	H.D. Acetate Concentrate Solution	Haemodialysis acetate concentrate; exact electrolyte formula not specified on PSI product page.	Preparation of dialysis fluid for haemodialysis after dilution by dialysis equipment.
Haemodialysis solutions	H.D. Acid Concentrate Solution	Haemodialysis acid concentrate; exact electrolyte formula not specified on PSI product page.	Preparation of dialysis fluid for haemodialysis after dilution by dialysis equipment.
Haemodialysis solutions	Sodium Bicarbonate 8.4%	Sodium bicarbonate solution at listed concentration.	Alkalinizing agent used for metabolic acidosis, urine alkalinization, and haemodialysis-related bicarbonate supply depending on presentation.
Haemodialysis solutions	Sodium Bicarbonate 8.125%	Sodium bicarbonate solution at listed concentration.	Alkalinizing agent used for metabolic acidosis, urine alkalinization, and haemodialysis-related bicarbonate supply depending on presentation.
Oral solutions	Babylyte Solution (ORS)	Oral rehydration salts solution.	Oral rehydration for dehydration due to diarrhea, vomiting, or fluid loss.
Oral solutions	Oral Dextrose 5%	Dextrose/glucose 5% oral solution.	Oral carbohydrate/fluid support where clinically appropriate.
Oral solutions	Oral Water	Purified/drinking water oral solution.	Oral hydration/diluent.
Pain management	Paracetol (Paracetamol 1gm)	Paracetamol 1 g.	Analgesic and antipyretic for pain and fever.
Pain management	Ambafen (Ibuprofen 400mg)	Ibuprofen 400 mg.	Non-steroidal anti-inflammatory drug (NSAID) for pain, fever, and inflammation.
Local anaesthetics	Lidocaine 1%	Lidocaine hydrochloride 1% solution.	Local anesthetic for local/regional anesthesia and clinician-directed procedural use.
Local anaesthetics	Lidocaine 2%	Lidocaine hydrochloride 2% solution.	Local anesthetic for local/regional anesthesia and clinician-directed procedural use.
Anti-muscarinic agents	Atropine Sulphate 0.5mg/ml	Atropine sulphate 0.5 mg/ml.	Antimuscarinic agent used for symptomatic bradycardia, pre-anesthetic reduction of secretions, and some poisoning contexts under medical supervision.
Anti-muscarinic agents	Atropine Sulphate 0.6mg/ml	Atropine sulphate 0.6 mg/ml.	Antimuscarinic agent used for symptomatic bradycardia, pre-anesthetic reduction of secretions, and some poisoning contexts under medical supervision.
Anti-infective products	Metronidazole I.V. 500mg	Metronidazole 500 mg IV solution.	Treatment/prophylaxis of anaerobic bacterial infections and susceptible protozoal infections.
Anti-infective products	Cipro-Sol I.V. (Ciprofloxacin 200mg)	Ciprofloxacin 200 mg IV solution.	Fluoroquinolone antibacterial for susceptible bacterial infections.
Anti-infective products	Fluco-Sol I.V. (Fluconazole 200mg)	Fluconazole 200 mg IV solution.	Triazole antifungal for susceptible Candida and other fungal infections.
Respiratory inhalation solutions	Atrosol (Ipratropium Bromide 250mcg per 2 ml)	Ipratropium bromide 250 mcg/2 ml nebulizer solution.	Bronchodilator for bronchospasm in COPD and asthma as directed.
Respiratory inhalation solutions	Atrosol (Ipratropium Bromide 500mcg per 2 ml)	Ipratropium bromide 500 mcg/2 ml nebulizer solution.	Bronchodilator for bronchospasm in COPD and asthma as directed.
Respiratory inhalation solutions	Bronchovent (Salbutamol 5mg/ml)	Salbutamol 5 mg/ml nebulizer solution.	Short-acting beta2 agonist bronchodilator for acute bronchospasm/wheezing in asthma or COPD.
Ophthalmic solutions	Balanced Salt Solution (B.S.S.)	Balanced salt ophthalmic solution.	Ophthalmic irrigation during eye surgery/procedures.

Category	Product name	Ingredients / composition	Uses / indications
Iron supplement	Ferroven (Iron Sucrose 100mg per 5ml)	Iron sucrose 100 mg/5 ml.	Parenteral iron replacement for iron deficiency anemia when oral iron is unsuitable or insufficient.
