Company Overview

ABOUT

ISTSEH is a lean healthcare technology startup building a personalized medication care platform for patients and families. Starting in Kuwait, the company focuses on lifestyle-based scheduling, safety awareness, Arabic/English accessibility, and family follow-up, with a long-term goal of expanding across the GCC and beyond.

VISION

To become a trusted medication care platform across Kuwait, the GCC, and future global healthcare markets.

MISSION

To make medication care safer and easier through smart scheduling, safety insights, bilingual accessibility, and family support.

VALUES

Safety, trust, simplicity, accessibility, and responsible innovation.

THE PROBLEM WE ARE SOLVING

Healthcare in Kuwait can feel fragmented when key patient details like allergies, chronic diseases, and medication interactions are not easily available, while regular reminder apps fail to adapt to daily routines or support family follow-up for elderly relatives.

UVP STATEMENT

ISTSEH is much more than just a simple pill reminder. It is a comprehensive medication-care assistant that intelligently combines personalized daily scheduling, proactive safety warnings, reliable caregiver support, and highly secure health profiles designed specifically for Kuwait and GCC families.

BRAND IDENTITY

Color Pallete

Key Statistics and Market Evidence

Chronic Diseases Drive Higher Hospital Use in Kuwait

Source: Frontiers

This graph shows how common complex medication routines are among older patients in Kuwait, including multiple medicines, frequent daily doses, need for help, and nonadherence.

Number of adults (20–79 years) with diabetes in Kuwait

Source: International Diabetes Federation

This graph shows the rising number of adults aged 20–79 with diabetes in Kuwait from 2000 to the projected figure for 2050.

Medication Errors In Kuwait (2021)

Source: Frontiers

This graph shows the most reported types of medication errors in Kuwait, including prescribing errors, wrong dose, missed medication, and wrong-time use.

Product / Service Idea

HOW ISTSEH WORKS

Step 01

Add health profile

The user adds basic health details such as allergies, chronic conditions, daily routine times, and caregiver connection if needed. This allows ISTSEH to understand the person behind the medication list, not just the medicine names.

Step 02

Build medication plan

Users can add medicines manually, search for medication information, or use image-based recognition. ISTSEH then helps organize key details such as dose timing, food instructions, reminder times, and whether the medicine is taken daily or only when needed.

Step 03

Follow daily care safely

The Today page shows the user’s scheduled doses and appointments in a clear daily view. ISTSEH sends reminders, tracks taken or skipped doses, and displays safety warnings when there may be duplicate ingredients, allergy risks, or medication interaction concerns.

Optional Step

Add a family member

ISTSEH also allows a user to add a family member and manage their medication care as a caregiver. This feature is designed for people who support an elderly parent, child, or relative who may need help remembering medicines, understanding schedules, or staying consistent with daily care, the caregiver creates a family member profile, adds the person’s basic medical details such as allergies, chronic conditions, routine times, and medications, then manages reminders and appointments on their behalf. This means the app can support both independent patients and family-supported patients without making the experience complicated.

KEY FEATURES

Medication reminders

Daily and weekly views organize every dose clearly, with taken, skipped, and missed-dose tracking.

Adaptive alerts

Alerts adapt to medication timing, appointments, routine changes, and important safety moments.

Caregiver connection

Family members can support patients, manage medication plans, and monitor care through linked profiles.

Safety warnings

ISTSEH checks medications against allergies, duplicate ingredients, and possible interaction risks before saving.

Medical profile

Each user has a medical profile for allergies, chronic conditions, routine times, and emergency details.

AI medication guide

The assistant helps explain medication information, schedule instructions, and safety notes in simple language.

Smart routine-based schedule

Builds dose timing around wake time, meals, bedtime, food rules, and caregiver-supported care plans.

Medication search

Users can search for medicines and view simplified information from verified medication data sources.

Secure health data

Protects personal medication records, medical profile details, and caregiver access with privacy-focused account controls.

Market Research

TAM

\$540.3M

Kuwait digital health market

Source: [Oxford Business Group](#)

SAM

\$71M

Kuwait mHealth apps market

Source: [Grand View Horizon](#)

SOM

\$1.1M

SOM was estimated using the projected 2024 Kuwait mHealth apps market and a realistic early capture rate: $SOM = SAM_{2023} \times (1 + CAGR)^n \times \text{Capture Rate} = \$60.7M \times (1 + 15.9\%)^1 \times 1.5\% = \$1.055M \approx \$1.1M$. This means ISTSEH’s obtainable market is estimated as 1.5% of the projected 2024 Kuwait mHealth apps market, using the reported 2023 market size and CAGR to project one year forward.

KEY TAKEAWAYS

- Fast Market Growth**
Kuwait’s mHealth apps market is projected to grow from \$60.7M to \$170.4M by 2030.
- Strong Product Fit**
ISTSEH fits within the mHealth apps market by focusing on personalized scheduling, health profiles, and safety support.
- Clear Market Gap**
Most apps stop at reminders. ISTSEH adds caregiver support, allergy-aware profiles, and safer medication planning.

METHOD

Online bilingual survey

PERIOD

May 11 - 26, 2026

Our Users

PERSONA 01
[Chronic-care patient]

Age: 25 - 65
Role: Manages long-term medications

PROFILE

Lives with one or more chronic conditions such as diabetes, hypertension, asthma, or heart disease.

NEEDS

Clear personalized dose timing, medication information, refill reminders, and safety alerts.

FRUSTRATIONS

Forgets doses, feels confused by instructions, struggles to organize multiple medicines, and worries about unsafe combinations or allergy-related warnings.

PERSONA 02
[Older adult]

Age: 65+
Role: Daily medicine user

PROFILE

Takes several medicines daily and may need support remembering when and how to take them.

NEEDS

Simple reminders, easy-to-read and maintain schedules, caregiver support, and clear instructions.

FRUSTRATIONS

Complex routines, small medication labels, memory gaps, uncertainty about missed doses, and too many medications.

PERSONA 03
[Family caregiver]

Age: 25 – 45
Role: Supports a parent or family member

PROFILE

Helps monitor medications, appointments, allergies, and chronic conditions for someone else.

NEEDS

Remote visibility, shared schedules, missed-dose alerts, and patient profile management.

FRUSTRATIONS

Does not always know if medicine was taken, struggles to keep track while at work, and worries about safety.

PERSONA 04
[Pharmacist partner]

Age: N/A
Role: Potential B2B customer/partner

PROFILE

Clinics, hospitals, insurance providers, or corporate wellness programs that support patients with chronic conditions.

NEEDS

Better medication adherence, patient follow-up, safety-risk tracking, and tools that reduce avoidable care gaps.

FRUSTRATIONS

Missed doses and unclear medication instructions can lead to preventable complications, repeat visits, and higher care costs, giving healthcare organizations a financial reason to support better medication management.

TOP SURVEY FINDING

Aged between 18-24 (87.7%)

Have a close family member with chronic disease (72.8%)

Take or know someone who takes 3+ medications daily (64.1%)

Have allergies (48.0%)

Have a chronic disease personally (23.5%)

Business Model

STREAM 02

Freemium

Free users get basic medication reminders and basic medication search, helping ISTSEH attract users before converting them to paid plans.

STREAM 01

Subscription

Monthly paid plans unlock personalized scheduling, medical profiles, safety warnings, refill reminders, and medication history.

STREAM 03

Partnerships

Start with local pharmacies for refill support and trusted service links, then expand to clinics, hospitals, and insurers for patient follow-up, adherence support, and care coordination.

STREAM 04

B2B licensing

Offer ISTSEH as a paid medication-care platform for clinics, hospitals, elderly-care centers, and insurers to help them monitor patient adherence, manage follow-ups, and support caregivers.

PRICING TIERS

Freemium

\$0

per month

- Basic medication reminders
- Basic medication search
- Simple daily medication list
- Limited saved medications

- Care+ features for main user
- Add up to 2 family members
- Caregiver access and permissions
- Shared medication schedules
- Family safety support
- 2\$ per additional family member

Company Structure & Development Plan

COMPANY STRUCTURE & VISION

IISTSEH's OPERATING SYSTEM

- Plan:** Set weekly priorities, assign task ownership, align deadlines, and decide what must be completed before the next review
- Build:** Move the product forward through app design, prototype updates, backend development, medication-data work, and report improvements.
- Review:** Check progress through advisor feedback, team discussions, quality checks, and problem-solving when blockers or design issues appear.
- Improve:** Apply user feedback, fix bugs, refine the experience, update business assumptions, and turn each review into clear next actions.

DEVELOPMENT STRATEGY

BUILD PROCESS

- 01

Discovery and research
Identified the medication-care problem, reviewed chronic disease and medication safety needs, and studied existing solutions in Kuwait, GCC, and global markets.
- 02

User Survey and Validation
Collected user feedback to understand medication habits, family health needs, allergy concerns, and demand for caregiver-supported medication management.
- 03

Brand and Identity Design
Developed ISTSEH's name, visual identity, colors, app tone, and Arabic-friendly healthcare design to build trust with patients and families.
- 04

Requirements and App's Initial Design
Defined the app's core requirements, user flows, screen structure, medication entry process, reminder logic, safety-warning experience, and caregiver journey.
- 05

Technical Development
Built the SwiftUI iOS app with backend support, including personalized scheduling, search, medical profiles, caregiver access, and safety checks.
- 06

Testing and Release Preparation
Tested core flows, reminders, data syncing, family profiles, safety warnings, and UI consistency before preparing the product for pilot users.

Medication Data Strategy

ISTSEH is building a local medication dataset and future API infrastructure to reduce reliance on online sources. This positions ISTSEH not only as a medication-care app, but also as a trusted medication information service provider for future B2B opportunities.

Marketing Report

POSITIONING STATEMENT

For Kuwait/GCC patients and caregivers, ISTSEH makes medication care safer and easier through reminders, personalized scheduling, safety warnings, and family support. This is especially important in Kuwait, where chronic disease burden is high: diabetes affects about 25.6% of adults, and 73.3% of adults are overweight or obese, increasing the need for organized long-term medication care.

BRAND PILLARS

Pillar 1

Safety

Medication reminders, allergy awareness, interaction warnings, and safer medication decisions before users save or take a medicine.

Pillar 2

Family Care

Caregiver support helps family members manage medicines, schedules, permissions, and patient profiles in one connected system.

Pillar 3

Simplicity

Clean Arabic-friendly design, clear schedules, and easy medication search make the app easier for elderly users and families.

Pillar 4

Trust

Privacy-focused health profiles, secure caregiver access, and verified medication information help users feel confident using ISTSEH.

GO-TO-MARKET PLAN

CHANNELS AND TACTICS

Awareness

Instagram, TikTok, and short videos showing medication problems, caregiver stories, and app demos.

Trust Building

Pharmacists, health students, and educational content explaining reminders, safety warnings, and family care.

Medication Streak Rewards

Users build a streak by taking medications on time. Longer streaks unlock rewards such as pharmacy coupons, Care+ trial days, or subscription discounts through future partner offers.

Access

Pharmacy QR codes, university pilots, and clinic introductions to reach users in real-life healthcare settings.

Week	Platform	Format	Theme	CTA

Sales, Partnerships & Growth

SALES FUNNEL

REVENUE PATH

Free users enter through basic reminders and search, then upgrade to Care+ or Family when they need safety warnings, medical profiles, refill reminders, medication history, and caregiver support.

PARTNERSHIP PIPELINE

Pharmacies
Planned refill support, QR campaigns, medication education, and future coupon rewards.
Clinics
Future chronic-care follow-up pilots for patients who need medication routine support.
Universities
Pilot feedback, student outreach, healthcare awareness content, and research validation.
Insurance
Future B2B model focused on adherence, prevention, and reducing avoidable medication-related costs.
App Store / Website
Main direct-user conversion channel through app previews, feature pages, and download links.

Financial Plan

STARTUP CAPITAL

\$1200

MONTHLY BURN

\$450

BREAK-EVEN

10 - 12 Months

YEAR 1 REVENUE

6000\$ Target

Line item	Y1	Y2	Y3
Revenue	\$6000	\$18000	\$45000
Tech & hosting	\$1800	\$3600	\$7200
Marketing	\$1200	\$3000	\$6000
Operations	\$1500	\$3500	\$8000
Net profit	\$1500	\$7900	\$23800

Illustrative break-even projection

Estimated break-even around Month 10–12 if paid conversion begins after launch.

FUNDING PLAN

ISTSEH starts with lean founder funding and low-cost marketing. After pilot validation, future funding may come from grants, accelerators, angel investors, or strategic healthcare partners.

KEY ASSUMPTIONS

Care+ is priced at \$6/month, Family at \$8/month plus \$2 per extra member. Early costs stay lean, and revenue depends on pilot feedback, App Store launch, and free-to-paid conversion.

Legal and Ethical Plan

COMPLIANCE CHECKLIST

- Review Kuwait healthcare, data privacy, and digital health requirements before public launch.
- Add Terms of Service, Privacy Policy, consent notices, and App Store health disclaimers.
- Encrypt sensitive health data during storage and transfer, with secure access controls.
- Use consent-based caregiver access, with clear permissions, revocation, and audit trails.
- Source-check medication data and separate verified information from AI-generated summaries.
- Require user confirmation before saving AI-parsed schedules, scanned medications, or safety-related outputs.
- Avoid giving diagnosis or treatment advice, and clearly state that ISTSEH does not replace doctors or pharmacists.
- Reduce risk through pilot testing, verified sources, warning logs, privacy controls, and regular safety reviews.

DATA PRIVACY

Health data is protected through secure storage, encrypted transfer, consent-based caregiver access, and user-controlled profile management.

ETHICAL PRINCIPLES

ISTSEH supports medication organization and safety awareness only. Medication information must be source-checked, and AI outputs require user confirmation.

DISCLAIMER

ISTSEH does not replace doctors, pharmacists, or emergency care. Users should always consult a healthcare professional for medical decisions.

Risk Analysis & Mitigation

Risk		Likelihood	
Competitor entry	[HIGH]	[MED]	Differentiate through GCC-focused UX, caregiver support, safety features, pharmacy coupons, medication streak rewards, and future dataset/API services
Low user adoption	[MED]	[HIGH]	Use freemium access, caregiver-focused messaging, pilot feedback, and website/App Store conversion.
Data privacy breach	[LOW]	[HIGH]	Encrypt health data, limit caregiver access by consent, use audit logs, and apply secure backend policies.
Medication-data inaccuracy	[MED]	[HIGH]	Use source-backed medication data, require user confirmation, and avoid treating AI outputs as medical advice.
Regulatory uncertainty	[LOW]	[MED]	Review Kuwait healthcare and data privacy requirements before public launch and regularly staying up to date with new changes.
Funding shortfall	[MED]	[HIGH]	Keep early costs lean, use founder funding, and seek grants, accelerators, angels, or healthcare partners after pilot validation.
Team capacity	[MED]	[MED]	Prioritize core features, reduce scope when needed, and use weekly planning to manage workload.
Technical debt	[MED]	[MED]	Review code, document backend changes, test critical flows, and avoid rushing safety-related features.

SDG and Track Connection

SDG 03

Good Health and Well-Being

ISTSEH supports safer medication routines through reminders, caregiver support, health profiles, and safety-warning features.

SDG 09

Industry, Innovation, Infrastructure

ISTSEH contributes to digital health innovation through mobile technology, backend systems, AI-supported medication information, and future medication-data infrastructure.

SDG 10

Industry, Innovation, Infrastructure

ISTSEH improves access to medication-care support through Arabic/GCC-focused design, elderly-friendly usability, and caregiver tools for families managing chronic care.

COMPETITION TRACK

Innovation and Technology / Artificial Intelligence

ISTSEH fits the Innovation and Technology track because it uses a mobile app, backend systems, medication data, and digital reminders to solve a real healthcare coordination problem. It also connects to Artificial Intelligence through AI-supported medication search, image-based medication recognition, and schedule parsing, while keeping user confirmation and safety controls central.

PRE-LAUNCH TESTS TARGET

50-100

Beta users

70%

Reminders completed on time

3-5

Healthcare partners approached

20+

Caregiver users test cases

90%+

Safety checks reviewed before saving

Roadmap

12-MONTH OUTLOOK

Strategic Initiative · 01

Local Medication Dataset

Build a Kuwait/GCC-focused medication database that improves medication search accuracy, reduces reliance on scattered online sources, and gives ISTSEH stronger control over medication names, ingredients, forms, and safety-related information. Over time, this dataset can become the foundation for future B2B medication-information services for pharmacies, clinics, and healthcare partners.

Strategic Initiative · 02

Caregiver Alerts & Rewards

Expand caregiver support by adding missed-dose alerts, refill reminders, medication streaks, and pharmacy coupon rewards. This helps ISTSEH move beyond basic reminders by encouraging long-term adherence, giving families better visibility, and creating retention features that keep users engaged after the first download.

Strategic Initiative · 03

Healthcare Partner Portal

Explore a future portal for clinics, pharmacies, and care providers to support patient follow-up, refill coordination, and medication-care insights. This would allow ISTSEH to grow from a consumer app into a service platform that helps healthcare partners stay connected with patients while improving medication routine support.
