

Medication Intelligence for Everyone

IOS APPLICATION · HEALTHCARE TECHNOLOGY

Chronic patients are **at risk** every single day

Fragmented Records

In Kuwait & GCC, patients visit multiple hospitals. No single system holds their complete medication list — creating dangerous blind spots.

67%
of GCC patients visit 3+ hospitals

Drug Interaction Risk

Patients managing 5-10+ daily medications have no automated way to detect dangerous drug-drug or drug-allergy interactions in real-time.

1.3M
injuries/year from medication errors (US alone)

Timing Complexity

"Take 30 min before food", "Wait 2 hours after Medication A" — patients are expected to solve complex scheduling puzzles on their own.

50%
of chronic patients miss doses due to confusion

— THE SOLUTION

Introducing ISTSEH

ISTSEH is an intelligent iOS medication management app that helps patients remember their doses, understand what each medication does, avoid dangerous drug interactions, and allows caregivers to remotely monitor their loved ones — all from one beautifully simple interface.

- **Built natively for iPhone with SwiftUI**
- **AI-powered drug intelligence engine**
- **Designed for patients, caregivers & families**
- **Arabic-first, Kuwait & GCC focused**

APP IN ACTION

Your Day, Organized

Every dose, appointment, and medication — all in one place.

TODAY VIEW

MEDICATIONS

APP IN ACTION

Plan Ahead, Stay Informed

A full calendar view and instant drug information lookup at your fingertips.

CALENDAR VIEW

DRUG SEARCH

— CORE FEATURES

Built for Real Lives

Smart Scheduling

Builds your medication schedule around wake time, meal times, and bedtime — automatically and in real-time.

Drug Interaction Check

AI-powered engine detects HIGH, MEDIUM, and LOW risk interactions between all your active medications instantly.

Medication Search

Instant lookup for any drug: uses, dosage, side effects, food rules, warnings, and available strengths.

Missed Dose Follow-Up

Smart reminders that follow up if you miss a dose — and alert your caregiver for critical medications.

Caregiver Mode

Family members connect via a care code to monitor a loved one's medication adherence remotely.

Camera Recognition

Point your camera at a medication label — ISTSEH reads it and auto-fills the details for you to confirm.

— DIFFERENTIATION

Why ISTSEH is fundamentally different

FEATURE	GENERIC REMINDER APPS	ISTSEH
Scheduling	✗ Fixed-time pings	✓ Dynamic schedule based on meals, sleep & drug rules
Safety Checks	✗ None	✓ Real-time allergy & interaction cross-check
Lab Results	✗ Not supported	✓ AI plain-language analysis
Data Entry	✗ Manual typing	✓ Camera-first: snap & auto-schedule
Privacy	✗ Cloud-dependent	✓ Offline-first, on-device data
Localization	✗ English-only, US-centric	✓ Arabic-first, Kuwait & GCC focused

ISTSEH doesn't just remind — it **thinks**, **protects**, and **adapts** to each patient's unique daily life.

— SMART SCHEDULING

A Schedule That Fits Your Life

ISTSEH builds a realistic, personalized medication schedule based on how you actually live — not just fixed alarm times.

— AI SAFETY ENGINE

Safety First. Always.

When a new medication is added, ISTSEH automatically checks it against the user's entire medication list and medical profile — flagging dangerous combinations before they happen.

HIGH Risk — Avoid Together

Clear alert before saving. Caregiver notified if linked.

MEDIUM Risk — Use With Caution

Warning displayed. Scheduling adjusts timing automatically.

LOW Risk — Safe to Take Together

Medication added without interruption to the schedule.

WHAT ISTSEH CHECKS

✔ **Drug-to-drug interaction (active ingredients)**

✓ Allergy matching against user profile

✓ Chronic condition contraindications

✓ Age-group appropriateness warnings

✔ **Food and beverage restrictions**

✔ Brand-name to generic ingredient mapping

CAREGIVER MODE

Care for Those You Love Most

Family members and professional caregivers link to a patient's account with a unique care code — no technical setup required. Once connected, they monitor adherence and receive missed-dose alerts.

- 1 Patient generates a unique Care Code in ISTSEH
- 2 Caregiver enters the code to instantly link accounts
- 3 Caregiver views live schedule and receives dose alerts

CAREGIVER CAN SEE

- ✓ Patient's full medication list
- ✓ Daily dose schedule and times
- ✓ Taken vs. missed dose history
- ✓ Push alerts for critical missed doses

Designed for elderly care

40% of adults 65+ manage 5 or more medications daily — often with no support system.

— MARKET OPPORTUNITY

A Massive and Growing Market

Medication management sits at the intersection of mobile healthcare and AI-powered patient tools — both in explosive growth.

\$5.4^B

Global medication management app market projected by 2030 — growing at 18% annually

157^M

Americans managing at least one chronic condition requiring ongoing medication

1 in 3

hospital admissions in elderly patients linked directly to medication non-adherence

📱 **GCC & MENA Expansion Ready**

Arabic-first from day one — targeting Kuwait and GCC markets where medication complexity is highest.

📱 **B2B Healthcare Channel**

Hospitals and pharmacies actively seek patient adherence tools to reduce readmission rates.

— BUSINESS MODEL

Three Revenue Streams

ISTSEH is designed to grow from a direct-to-consumer app into a full healthcare intelligence platform.

STREAM	MODEL	TARGET	VALUE DELIVERED
01 — Consumer Freemium	Free core app · Premium subscription for advanced features	Individual patients · Family caregivers	Adherence Full medication history, caregiver linking, priority drug AI
02 — B2B Healthcare	Licensed white-label platform per institution	Hospitals · Clinics · Pharmacies	Outcomes Reduce readmission rates, remote patient monitoring
03 — API Licensing	Drug intelligence engine licensed as an API	HealthTech companies · Insurance · EHR systems	Intelligence AI drug lookup, interaction check, scheduling logic

Starting with consumers builds the dataset. That dataset powers the B2B product. The B2B product validates the API. Each stream strengthens the others.

Already Built

ISTSEH is not a concept — it is a fully functional iOS application with a production-grade backend, running today.

TECH STACK

- SWIFTUI · IOS
- SUPABASE
- OPENAI GPT
- FDA / NIH APIS
- EDGE FUNCTIONS
- POSTGRESQL

- ✓ Full iOS App — SwiftUI, 5 tab screens
- ✓ Smart Scheduling Engine — routine-based dose timing
- ✓ AI Drug Intelligence — OpenAI + FDA, cached
- ✓ Drug Interaction Checker — HIGH / MEDIUM / LOW
- ✓ Supabase Backend — auth, profiles, medications
- ✓ Push Notifications — dose reminders + quick actions
- ✓ Camera Recognition — image-to-drug via OpenAI Vision
- ✓ Caregiver Linking — care codes, device sessions

ROADMAP

Where We're Headed

PHASE 1 — NOW

Launch

- Full iOS app with core features
- Smart scheduling and interaction checking
- Caregiver linking via care codes
- Camera medication recognition
- Supabase backend with AI drug engine

PHASE 2 — 6 MONTHS

Expand

- Full Arabic language support
- Android application
- Advanced analytics dashboard
- Improved dose history tracking
- First B2B pilot partnerships

PHASE 3 — 18 MONTHS

Scale

- Hospital and clinic integrations
- Insurance company partnerships
- EHR sync
- API licensing to third-party platforms
- Clinical research data program

North Star Metric

Reduce medication non-adherence among ISTSEH users by 60% within 12 months of launch — measured through dose completion tracking and caregiver confirmation data.

THE VISION

Medication Intelligence for Everyone

Every person who takes a medication deserves to understand it, take it correctly, and stay safe while doing so. ISTSEH makes that possible — for patients, caregivers, and the families who depend on them.
